# Biodiversity and Design in the Global Urban Landscape

• 연사 :

**Maria Ignatieva**

**Swedish University of Agricultural Sciences  
Uppsala, Sweden**

• 일시 : **10월 8일 16:30-18:00**

• 장소 : **농생대 200동 9207호**

## ♣ 연사 소개

### **Maria Ignatieva**

- Professor in Landscape Architecture, Swedish University of Agricultural Sciences, Uppsala, Sweden  
Honorary Doctor of St. Petersburg State Forest Technical University
- URBIO (Urban Biodiversity and Design) Advisory Group Member
- ECLAS (European Council of Landscape Architecture Schools) Executive Committee Member

## ♣ 강연 개요

Today the process of globalization is associated with the use of similar urban design and planning structures (downtowns, 'routine' modernism buildings), landscape architecture styles (global picturesque and gardenesque), and similar plant and construction materials. Lawn is one of the most powerful symbols of globalization today which covers up to 70 % of all open urban spaces. Urban biodiversity today can play an important role for ecological and cultural identity of cities around the world.

This lecture will explore existing approaches (case studies) in dealing with design of urban biodiversity in different countries around the globe such as Low Impact Development, alternative lawns and 'spontaneous vegetation'.
